

## Analysis Requirements for New Waste Streams

| Parameter                                    | Units    |
|----------------------------------------------|----------|
| Nitrogen, Total Kjeldahl                     | mg/L     |
| Nitrogen, Ammonia (NH <sub>3</sub> .N) Total | mg/L     |
| Organic Nitrogen                             | mg/L     |
| Chloride                                     | mg/L     |
| Phosphorus, Total                            | mg/L     |
| Potassium, Total Recoverable                 | mg/L     |
| pH                                           | su       |
| Solids, Total                                | mg/L     |
| COD                                          | mg/L     |
| Arsenic Dry Wt                               | mg/kg    |
| Cadmium Dry Wt                               | mg/kg    |
| Copper Dry Wt                                | mg/kg    |
| Lead Dry Wt                                  | mg/kg    |
| Mercury Dry Wt                               | mg/kg    |
| Molybdenum Dry Wt                            | mg/kg    |
| Nickle Dry Wt                                | mg/kg    |
| Selenium Dry Wt                              | mg/kg    |
| Zinc Dry Wt                                  | mg/kg    |
| Fecal Coliform *                             | MPG/g TS |

\* *Municipal Clients Only*

**Analytical results shall be provided on a wet-weight basis for liquid wastes and on a dry-weight basis for sludge and other solid or semi-solid material.**

**ALL necessary parameters must be provided prior to approval.**
